Education

Robotics Engineering and Artificial Intelligence	2022-2026
Chiang Mai University	GPAX 3.33

Experience

Internship at TESR co, Ltd 2025

Assistant Engineer

- **Designed and developed** an autonomous mobile robot (AMR) for industrial indoor delivery, optimizing logistics efficiency within factory environments.
- **Architected AI-integrated IoT** workflows using n8n to automate data processing and enhance system connectivity.
- **Delivered technical training sessions** on robotic arm operation and programming for clients, ensuring seamless technology adoption.

Academic Project

Senior Project 2025-2026

White Post : Autonomous Inter-Building Document Delivery Robot

- **Designed and engineered the robot's drive system**, including mechanical structure and transmission components for inter-building navigation.
- **Implemented a PID Control algorithm** to regulate motor speed and ensure precise movement and stability during operation.
- **Managed technical documentation and project scheduling**, including the development of system specifications and presentation materials for booth exhibitions.

3rd year Project 2025-2026

An Autonomous Clinical Assistant for Dental Instrument Logistics

- **Designed and engineered the robot's drive system**, including mechanical structure and transmission components for inter-building navigation.
- **Implemented a PID Control algorithm** to regulate motor speed and ensure precise movement and stability during operation.
- **Managed technical documentation and project scheduling**, including the development of system specifications and presentation materials for booth exhibitions.

Honors & Awards

Best Presentation Award, The 31st Tri-U International Joint Seminar & Symposium 2025

- **Presented "DenTalk : A Dental Communication Device"** showcasing an innovative solution for disability's clinical communication.

Best Technical Award Jinpao Automation Contest 2023

- **Engineered and implemented** the robot's drive system for high-performance mobility and structural integrity.

1ST Placed TPA Robot Contest Thailand Championship 2023

- **Secured corporate sponsorships** and managed external relations to fund robot development and logistics.

About Me

Robotics Engineering and AI student at Chiang Mai University, specializing in Autonomous Robot Systems, Drive System Design, and Hardware-Software Integration. Experienced in developing end-to-end robotic solutions, combining mechanical design with advanced control systems using ROS2 and microcontroller platforms such as ESP32 and STM32.

Proven ability to deliver functional hardware from concept to working prototypes, with a focus on PID control and AI workflow automation. Beyond core engineering, I possess hands-on experience in project management and technical communication, particularly in developing assistive technology. I am committed to building reliable, intelligent robotic systems that drive industrial efficiency and create a positive social impact.

Skills

- Robotics
 - Arm Robot (DOBOT, ABB)
 - ROS2
- Embedded Systems & IoT
 - ESP32, STM32, Arduino
 - Micro-ROS
- 3D CAD Design
 - SolidWorks, Autodesk Fusion
- PCB Design
 - EasyEDA
- Software & AI Automation
 - AI Workflow Automation (n8n)
 - Python, C++
 - TIA Portal (PLC Programming)

Languages

Thai	Native
English	TOEIC 625 (B1)
Japanese	Beginner
